1. Executive Summary

What is AlphaAI?

AlphaAI is a Software-as-a-Service (SaaS) platform that provides AI-generated cryptocurrency trading signals and market insights. The platform analyzes market data in real-time and delivers actionable BUY, SELL, or HOLD recommendations to help traders make informed decisions.

Core Value Proposition

"AI crypto signals + trading insights platform"

Simplifying cryptocurrency trading through intelligent automation and real-time analysis.

Target Users

- Retail crypto traders seeking data-driven insights
- Beginners looking for guidance in volatile markets
- Experienced traders wanting to automate signal detection
- Portfolio managers tracking multiple assets
- Anyone interested in AI-powered financial tools

Business Model

AlphaAI operates on a freemium SaaS model with three subscription tiers:

- **Free:** Limited access with 15-minute delayed signals
- **Pro (\$29/month):** Real-time signals, alerts, and full AI analysis
- **Elite (\$79/month):** Priority features, custom alerts, and dedicated support

2. Product Overview

Dashboard Experience

The AlphaAI dashboard provides a clean, modern interface designed for quick decision-making. Users can view current market signals, track performance metrics, and access AI-generated market analysis all from a single screen.

Today's AI Signals

The core feature displays real-time trading signals for major cryptocurrencies (BTC, ETH, SOL, etc.). Each signal includes:

- Asset symbol and current price
- Signal type: BUY, SELL, or HOLD
- Confidence score (percentage)
- Visual color coding (green for BUY, red for SELL, yellow for HOLD)

Delayed vs Real-Time Signals

Free users receive signals with a 15-minute delay, while Pro and Elite subscribers get instant, real-time updates. This delay creates natural conversion pressure while still providing value to free users.

Performance Tracking

The dashboard displays key performance metrics:

30-Day Return	Win Rate	Max Drawdown	Total Signals
+12.4%	68%	4.2%	847

Note: All performance data is from paper trading simulations

AI Market Summary

An AI-generated text summary provides context for current market conditions, helping users understand the reasoning behind each signal.

3. Key Features

AI-Generated Signals

Automated BUY/SELL/HOLD recommendations based on technical analysis, market sentiment, and AI pattern recognition.

Performance Metrics

Track returns, win rate, maximum drawdown, and total signals generated over various time periods.

Signal History

View recent signals with their outcomes (e.g., 'BTC → BUY → +2.1%') to build trust and demonstrate consistency.

Missed Trade Indicators

FOMO-inducing displays showing trades free users missed (e.g., 'Signal triggered 12 mins ago → +1.6%').

Upgrade Prompts

Strategic CTAs throughout the interface encouraging conversion to paid plans.

Demo Mode

Users can explore the platform without connecting a wallet, reducing friction to trial.

Live User Counter

Social proof showing active users (e.g., '27 users viewing signals right now').

Countdown Timer

Creates urgency with 'Next signal update in: 00:45' countdown.

4. User Experience Flow

The typical user journey through AlphaAI:

1. **Landing:** User arrives at homepage, sees value proposition and live signal preview
2. **Entry:** Clicks 'Try Demo Mode' or 'Connect Wallet' to access dashboard
3. **Discovery:** Views delayed signals (15-min delay for free users)
4. **Engagement:** Explores performance metrics, signal history, AI summaries
5. **Conversion Triggers:** Sees upgrade prompts, missed trades, social proof
6. **Decision Point:** Encounters 2-minute popup or exit-intent modal
7. **Upgrade:** Clicks upgrade, completes Stripe checkout (\$29/month)
8. **Activation:** Instantly unlocks real-time signals and full features
9. **Retention:** Continues using platform with live data and alerts

Key Insight: The flow is designed to provide immediate value (free signals) while creating natural friction (delay) that motivates upgrades.

5. Conversion System

AlphaAI implements multiple conversion optimization techniques to maximize free-to-paid upgrades:

Delay Warning Banner

Prominent yellow banner: 'Live signals update every minute — You are viewing a 15 minute delay'. Creates awareness of the limitation without being aggressive.

Strategic Upgrade Buttons

- Large gradient 'Unlock Live Signals' button with glow effect
- 'Upgrade Now' button in demo mode banner
- 'Upgrade to Pro' CTA card with feature comparison

Locked Features Preview

Blurred cards showing 'Real-Time Alerts' and 'Advanced Analytics' with 'Pro Feature' overlay. Users can see what they're missing.

Timed Popup (2 Minutes)

After 2 minutes on the dashboard, an upgrade modal appears with benefits and pricing. Catches engaged users at peak interest.

Exit Intent Popup

When user's mouse leaves the viewport (indicating they may leave): 'Wait — unlock live signals before you go'. Shows what they're missing and active user count.

Social Proof Elements

- '27 users viewing signals right now' (randomizes 15-50)
- 'Pro users received these signals in real-time' under signal history
- Active user count in exit popup

FOMO Triggers

Under each signal: 'Signal triggered 12 mins ago → +1.6% — You missed this'. Updates every 20 seconds with realistic timestamps and gains.

6. Pricing Model

AlphaAI offers three subscription tiers designed to maximize conversion and revenue:

Feature	Free	Pro (\$29/mo)	Elite (\$79/mo)
AI Signals	✓ Delayed (15 min)	✓ Real-time	✓ Real-time
Signal History	✓ Limited	✓ Full Access	✓ Full Access
Performance Stats	✓ Basic	✓ Advanced	✓ Advanced
Email Alerts	✗	✓	✓
Push Notifications	✗	✓	✓
AI Market Analysis	✗	✓	✓ Priority
Priority Support	✗	✗	✓
Custom Alerts	✗	✗	✓

Pricing Strategy

- **Free tier:** Provides genuine value but with friction (delay) to drive upgrades
- **Pro tier (\$29/mo):** Sweet spot pricing for serious retail traders
- **Elite tier (\$79/mo):** Premium offering for power users, 3x revenue per customer
- **Yearly option:** \$249/year for Pro (Save \$99) encourages longer commitments

7. Payment System

Stripe Integration

AlphaAI uses Stripe Checkout for secure, PCI-compliant payment processing. The integration supports credit cards and is extensible to crypto payments.

Checkout Flow

1. User clicks 'Upgrade Now' button
2. Selects plan (Monthly \$29 or Yearly \$249)
3. Frontend requests checkout session from backend
4. Backend creates Stripe session with success/cancel URLs
5. User redirected to Stripe hosted checkout page
6. After payment, redirected back to dashboard
7. Frontend polls backend for payment confirmation
8. Pro status activated immediately upon confirmation

Backend Endpoints

- **POST /api/payments/checkout** — Create checkout session
- **GET /api/payments/status/{session_id}** — Check payment status
- **GET /api/payments/packages** — List available packages
- **POST /api/webhook/stripe** — Handle Stripe webhooks

Data Storage

Payment transactions are stored in MongoDB 'payment_transactions' collection with session ID, wallet address, amount, status, and timestamps.

8. Technical Architecture

Component	Technology	Purpose
Backend	FastAPI (Python)	API server, business logic
Frontend	React 18 + Shadcn/UI	User interface
Database	MongoDB	Data persistence
Payments	Stripe	Subscription billing
Market Data	Kraken API	Live crypto prices
AI Analysis	OpenAI GPT-5.2	Market insights
Web3	ethers.js / web3.py	Wallet integration

API Structure

The backend exposes RESTful APIs organized by domain:

- **/api/live-prices** — Real-time crypto prices from Kraken
- **/api/payments/*** — Subscription and billing endpoints
- **/api/users/*** — User management and Pro status
- **/api/simulation/*** — Paper trading simulation
- **/api/lab/*** — Strategy lab and backtesting
- **/api/fund/*** — Fund statistics and performance

Frontend Architecture

Single-page React application with React Router for navigation. Uses Shadcn/UI component library for consistent, accessible UI elements. State management via React hooks and context.

Database Schema

- **investors** — User profiles, wallet addresses, Pro status
- **payment_transactions** — Stripe sessions, payment history
- **trades** — Paper trading history
- **strategies** — AI-generated trading strategies

9. Current Limitations

Important: The following limitations should be clearly understood:

Paper Trading Only

All trading is simulated. No real trades are executed. Performance metrics are based on backtesting and paper trading simulations, not actual trading results.

No Live Execution

The platform does not connect to exchanges for live trading. Users must manually execute trades based on signals if they choose to act on them.

Pro Features UI-Only

Currently, Pro subscription removes the 15-minute delay indicator and unlocks UI features. Backend signal differentiation (actually faster signals) is not yet implemented.

Smart Contract Not Deployed

The AlphaAIManager.sol contract exists but is not deployed to any network. Web3 features are simulated.

No User Authentication

Authentication is wallet-based only. No email/password login system exists.

Single Region

Backend runs in a single region without global distribution or CDN.

Disclaimer: All performance data shown on the platform is from paper trading simulations and does not represent actual trading results. Past simulated performance is not indicative of future results.

10. Future Roadmap

Phase 1: Core Improvements (Q2 2026)

- Implement actual real-time signal differentiation for Pro users
- Deploy smart contract to Sepolia testnet for testing
- Add JWT-based user authentication
- Email notification system for alerts and receipts

Phase 2: Trading Integration (Q3 2026)

- Integrate with Uniswap V3 for live DEX trading
- Implement blockchain event listeners
- Add copy-trading functionality
- WebSocket real-time updates (replace polling)

Phase 3: Growth Features (Q4 2026)

- Referral program with revenue sharing
- Public leaderboard for top performers
- Mobile app (React Native)
- Additional cryptocurrency support

Phase 4: Scale (2027)

- Global CDN deployment
- Enterprise API tier
- Institutional features
- Regulatory compliance (where applicable)

11. Performance Data

IMPORTANT: All data below is from PAPER TRADING simulations only. These are not real trading results and should not be interpreted as such.

30-Day Performance Summary

Metric	Value	Notes
Total Return	+12.4%	Simulated portfolio growth
Win Rate	68%	Profitable signals / Total signals
Max Drawdown	-4.2%	Largest peak-to-trough decline
Total Signals	847	Signals generated in period
Avg Signal/Day	28	Across all tracked assets
Best Single Trade	+4.2%	BTC BUY signal
Worst Single Trade	-1.8%	ETH SELL signal

Recent Signal Examples

Time	Asset	Signal	Result	Status
2h ago	BTC	BUY	+2.1%	✓ Profitable
4h ago	ETH	SELL	+1.4%	✓ Profitable
6h ago	SOL	BUY	+3.0%	✓ Profitable
8h ago	BTC	SELL	+1.8%	✓ Profitable
12h ago	ETH	BUY	-0.6%	✗ Loss

12. Branding & Positioning

Brand Identity

Element	Details
Name	AlphaAI
Tagline	AI-Powered Crypto Signals & Trading Insights
Primary Color	#7B61FF (Purple)
Accent Color	#00FF94 (Green)
Typography	JetBrains Mono (data), System fonts (UI)
Visual Style	Dark fintech, clean, minimal

Positioning Statement

AlphaAI is NOT: • A hedge fund • A financial advisor • A guaranteed profit system AlphaAI IS: • An AI-powered signals platform • A decision-support tool • A SaaS subscription service
--

Key Messaging

- Focus on **simplicity** — 'AI does the analysis, you make the decisions'
- Emphasize **accessibility** — 'Professional-grade insights for everyone'
- Highlight **transparency** — Clear labeling of paper trading data
- Build **trust** — Show consistent performance, not unrealistic promises
