

# AlphaAI

AI-Powered Crypto Signals Platform

**The Problem:** Crypto traders miss profitable opportunities because they can't monitor markets 24/7.

**The Solution:** AlphaAI delivers AI-generated BUY/SELL signals directly to users, so they never miss a trade.

# 1. Executive Summary

AlphaAI is a subscription-based SaaS platform that delivers AI-generated cryptocurrency trading signals to retail investors. Users receive clear BUY, SELL, or HOLD recommendations for major cryptocurrencies, eliminating the need for complex technical analysis.

## Business Model

Freemium SaaS with tiered subscriptions:

- **Free tier:** Attracts users with delayed signals (15-minute delay)
- **Pro (\$29/month):** Real-time signals, alerts, full AI analysis
- **Elite (\$79/month):** Priority features, custom alerts, dedicated support

## Why It Works

- Low barrier to entry — users can try before they buy
- Clear value gap — delayed vs real-time creates natural upgrade pressure
- Recurring revenue — monthly subscriptions create predictable income
- Scalable — AI signals cost the same whether serving 100 or 100,000 users

**Key Insight:** Users experience the product's value (signals) before paying, but the 15-minute delay creates urgency to upgrade. This drives a 9.8% free-to-paid conversion rate.

## 2. Value Proposition

### What Users Get

| Feature              | User Benefit                              |
|----------------------|-------------------------------------------|
| AI Trading Signals   | Know when to buy or sell without analysis |
| Confidence Scores    | Understand signal strength at a glance    |
| Performance Tracking | See historical accuracy and returns       |
| Real-Time Alerts     | Never miss a trading opportunity          |
| AI Market Summary    | Quick daily briefing on market conditions |

### Why Users Pay

The free tier shows users exactly what they're missing. Every delayed signal is a reminder that Pro users are trading 15 minutes ahead. Combined with 'missed trade' indicators showing potential profits, users quickly understand the cost of not upgrading.

### Target Market

- **Primary:** Retail crypto traders (25-45 years old) seeking an edge
- **Secondary:** Beginners intimidated by technical analysis
- **Tertiary:** Busy professionals who can't watch markets all day

### 3. Performance & Results

**IMPORTANT:** All performance data is from paper trading simulations. These are backtested results, not live trading. Past performance does not guarantee future results.

#### 30-Day Performance Snapshot

#### Sample Signal Outcomes

| Asset | Signal | Outcome | Time         |
|-------|--------|---------|--------------|
| BTC   | BUY    | +2.1%   | 2 hours ago  |
| ETH   | SELL   | +1.4%   | 4 hours ago  |
| SOL   | BUY    | +3.0%   | 6 hours ago  |
| BTC   | SELL   | +1.8%   | 8 hours ago  |
| ETH   | BUY    | -0.6%   | 12 hours ago |

The platform maintains a strong win rate by focusing on high-confidence signals. Users see this track record, building trust and increasing upgrade likelihood.

# 4. Product Experience

## Dashboard Overview

The AlphaAI dashboard is designed for clarity and quick decision-making. Users see everything they need in one screen:

- **Today's Signals** — Current BUY/SELL/HOLD for BTC, ETH, SOL with confidence %
- **Performance Stats** — 30-day return, win rate, max drawdown
- **AI Market Summary** — Plain-English market analysis
- **Signal History** — Recent trades and their outcomes

## User Journey

| Step | Action                | Experience                          |
|------|-----------------------|-------------------------------------|
| 1    | Lands on site         | Sees live signal preview            |
| 2    | Tries Demo Mode       | Full dashboard access, no signup    |
| 3    | Views signals         | Sees 15-min delay warning           |
| 4    | Watches missed trades | "You missed +1.6%" creates FOMO     |
| 5    | Hits upgrade prompt   | Clear pricing, easy checkout        |
| 6    | Upgrades to Pro       | Instant access to real-time signals |

## Demo Mode

Users can explore the full dashboard without signing up or connecting a wallet. This removes friction and lets prospects experience the product value immediately.

# 5. Monetisation Model

## Pricing Tiers

|                    | Free       | Pro        | Elite      |
|--------------------|------------|------------|------------|
| Price              | \$0        | \$29/month | \$79/month |
| Signal Delay       | 15 minutes | Real-time  | Real-time  |
| Email Alerts       | —          | ✓          | ✓          |
| Push Notifications | —          | ✓          | ✓          |
| AI Market Analysis | Basic      | Full       | Priority   |
| Custom Alerts      | —          | —          | ✓          |
| Priority Support   | —          | —          | ✓          |

## Revenue Projections

| Scenario  | Users  | Pro % | Elite % | MRR       |
|-----------|--------|-------|---------|-----------|
| Current   | 1,200  | 8%    | 2%      | \$4,680   |
| 6 Months  | 5,000  | 10%   | 3%      | \$26,350  |
| 12 Months | 15,000 | 12%   | 4%      | \$100,800 |
| 24 Months | 50,000 | 15%   | 5%      | \$415,000 |

\*Projections based on industry benchmarks for SaaS conversion rates

## Unit Economics

- **Customer Acquisition Cost (CAC):** ~\$15 (content marketing, social)
- **Average Revenue Per User (ARPU):** \$31/month (blended)
- **Lifetime Value (LTV):** ~\$186 (6-month avg retention)
- **LTV:CAC Ratio:** 12.4x (healthy SaaS benchmark is 3x+)

## 6. Conversion System

AlphaAI uses proven conversion tactics to turn free users into paying subscribers:

### Delayed Signal Warning

Yellow banner: 'Live signals update every minute — You are viewing a 15-minute delay'. Creates constant awareness of the limitation.

### Missed Trade Indicators

Under each signal: 'Triggered 12 mins ago → +1.6% — You missed this'. Shows real dollar value users are losing by not upgrading.

### Active User Counter

'27 users viewing signals right now' — Social proof that others trust the platform.

### Timed Upgrade Popup

After 2 minutes on dashboard, a modal appears with upgrade benefits. Catches engaged users at peak interest.

### Exit Intent Popup

When user moves to leave: 'Wait — unlock live signals before you go'. Last chance to convert abandoning visitors.

### Locked Feature Preview

Blurred cards showing 'Real-Time Alerts' and 'Advanced Analytics'. Users see what they're missing.

### Conversion Performance

| Trigger             | Views | Conversions | Rate  |
|---------------------|-------|-------------|-------|
| Timed Popup (2 min) | 800   | 30          | 3.75% |
| Exit Intent Popup   | 450   | 15          | 3.33% |
| Unlock Live Button  | 1,200 | 35          | 2.92% |
| Upgrade CTA Card    | 950   | 22          | 2.32% |

## 7. How Signals Work

AlphaAI generates trading signals using a combination of AI analysis and market data. Here's a simplified overview:

### Signal Generation Process

- **Data Collection:** Real-time prices from Kraken exchange
- **AI Analysis:** GPT-based model evaluates price patterns and market sentiment
- **Signal Output:** BUY, SELL, or HOLD with confidence percentage (0-100%)
- **Delivery:** Instant for Pro users, 15-min delay for free users

### Signal Types Explained

| Signal | Meaning                     | User Action                       |
|--------|-----------------------------|-----------------------------------|
| BUY    | AI predicts price will rise | Consider entering a long position |
| SELL   | AI predicts price will fall | Consider exiting or shorting      |
| HOLD   | No clear direction          | Maintain current position         |

### Confidence Scoring

Each signal includes a confidence score (e.g., 'BUY 87%'). Higher confidence means the AI has stronger conviction. Users learn to prioritize high-confidence signals.

**Important:** Signals are for informational purposes only. AlphaAI does not execute trades automatically. Users make their own trading decisions.

# 8. Technical Overview

AlphaAI is built on modern, scalable infrastructure:

| Component   | Technology        | Why                          |
|-------------|-------------------|------------------------------|
| Backend     | FastAPI (Python)  | Fast, async, easy to scale   |
| Frontend    | React + Shadcn/UI | Modern, responsive UI        |
| Database    | MongoDB           | Flexible, scalable NoSQL     |
| Payments    | Stripe            | Industry-standard, secure    |
| AI          | OpenAI GPT        | Best-in-class language model |
| Market Data | Kraken API        | Reliable exchange data       |

## Scalability

- Cloud-native architecture — scales horizontally
- AI signal generation is stateless — same cost per user
- No manual intervention required for 10x growth

## Current Limitations

- **Paper Trading Only:** All performance is simulated (no live execution)
- **Wallet Auth:** No email/password login yet
- **Single Region:** Not globally distributed (yet)

## 9. Roadmap & Growth Potential

### Near-Term (Q2 2026)

- Email/password authentication
- Email alerts for Pro subscribers
- Mobile-optimized experience

### Mid-Term (Q3-Q4 2026)

- Live trading integration (Uniswap, Coinbase)
- Copy-trading feature
- Mobile app (iOS/Android)
- Referral program with revenue share

### Long-Term (2027+)

- Enterprise API tier for institutions
- White-label solution for brokerages
- Additional asset classes (stocks, forex)
- Global expansion with localized content

### Growth Levers

| Lever                         | Impact | Effort |
|-------------------------------|--------|--------|
| SEO / Content Marketing       | High   | Medium |
| Referral Program              | High   | Low    |
| Social Media (Crypto Twitter) | Medium | Low    |
| Influencer Partnerships       | High   | Medium |
| App Store Launch              | High   | High   |

# Summary

**What AlphaAI Does:**

Delivers AI-generated crypto trading signals to help users make better decisions.

**Why Users Pay:**

Free tier shows value but creates friction (delay). Users upgrade to get real-time signals and stop missing profitable trades.

**How It Scales:**

SaaS model with near-zero marginal cost per user. AI signals cost the same whether serving 100 or 100,000 users. Strong unit economics (12.4x LTV:CAC).

MRR Potential

**\$415K**

LTV:CAC

**12.4x**

Conversion

**9.8%**
